### Soil Moisture Monitoring Using the National Drought Model

A.C. Chipanshi and R.T. Warren Agriculture and Agri-Food Canada (National Agroclimate Information Service)

Agriculture and Agri-Food Canada

#### Outline

- Conditions reporting
- Soil trafficability

### **Conditions Reporting**

- Monthly soil moisture anomaly and total • moisture in the soil are reported during **Growing Season**
- Comparisons with actual observations (if available) and with other models are made as means of calibrating the model

#### Monthly anomaly in August '06

**Comparison with simulations in Alberta** 

AARD

NAIS

## Comparison with simulations in Saskatchewan

#### **Drought Model**

Agriculture and Agri-Food Canada

# Comparison with the Fall soil measurements in Manitoba

**Drought Model** 

#### **Comparison with SSMI data**

Surface Soil Moisture Anomaly

Canada

Agriculture and

Agri-Food Canada

### **Conditions Reporting**

- We are seeing some spatial agreement in patterns
- More field testing including the use of radarsat is planned in 2007
- Comparison of SSMI data with P, top soil moisture for known events is planned for in 2007

Agriculture and

Agri-Food Canada

### Soil Trafficability

- Modelling and actual observations were made to determine soil trafficcability (after spring floods of 2006 in Manitoba); Morris area
- Trafficability was defined using the 90% of AWC recommendations-(Shaykewich report)

#### Study area

Note that Morris was flood free by April 25

#### **Soil Characteristics**

SiteID	Depth	Date	Town	Crop	PSM	BD	FC	WP	AWHC
ALT03	A	10/25/2005	Morris	Cereal Stubble	34.8	1.1	55.9	20.8	35.1
ALT03	В	10/25/2005	Morris	Cereal Stubble	33.3	1.3	49.7	20.5	29.2
ALT03	С	10/25/2005	Morris	Cereal Stubble	30.3	1.3	91.1	33.3	57.8
ALT03	D	10/25/2005	Morris	Cereal Stubble	28.1	1.3	108.4	38.3	70.1
ALT03	E	10/25/2005	Morris	Cereal Stubble	30.3	1.3	119.5	31.4	88.0
ALT10	A	10/25/2005	Rosenort	Cereal Tilled	44.7	1.0	64.5	27.5	37.0
ALT10	В	10/25/2005	Rosenort	Cereal Tilled	39.0	1.2	72.7	30.7	41.9

ALT10	D	10/25/2005	Rosenort	Cereal Tilled	29.7	1.3	140.1	63.9	76.2
ALT10	E	10/25/2005	Rosenort	Cereal Tilled	31.4	1.3	134.4	64.1	70.3

#### Point simulation vs. averaged Soil moisture observations

# Onset of trafficability (model, observations and field interviews)

#### Plans for 2007

• More simulations in the Red River Valley coinciding with new Manitoba climate stations (careful description of soil physical parameters needed)

• Work with historical data and come up with a probability distribution of trafficability dates

• Relate soil moisture simulations and observations to remote sensing work (SSMI and Radarsat)
